**A Note how to know the houre of the night by  
the moones comming to the South.**

Moone.			
South.	Age.		
H. M.	Day.		
12	48	1	17
1	36	2	17
2	24	3	18
3	12	4	19
4	0	5	20
4	48	6	21
5	36	7	21
6	24	8	22
7	12	9	24
8	0	10	25
8	48	11	26
9	36	12	27
10	24	13	28
11	12	14	29
12	0	15	30

First finde by this Table her comming  
to the South that day of her age wherein  
you desire to know the houre: and note  
that all the increase she comes to the  
South after noon, that is, untill she be  
15. dayes old: and all the decrease, (till  
10) in the morning.

Now then repassing to a Sun-diall,  
note how much it is past or wants of 12. a  
clocke: and so much it is past or wants of  
the houre of her South point that day.

**For example.**

I finde the shadow of the moone at 10. of the clocke,  
wanting 2. houres of 12. it being the 9. day of her age, and  
so her comming to the South at 7. houres and 12. mi-  
nutes; therefore wanting 2. houres of the same: so that  
it must be 5. of the clocke and 12. minutes past: or if the  
same day the shadow had bene at 2. in the afternoon, it  
had bene 2. houres past 7. and 12. minutes, that is, 9. and  
12. minutes. The like in the rest.

**The Parts of Mans body as they are gouerned  
by the twelve Signes.**

**The Signes regiment, expressed for memory in 4. verses.**

**To Aries head, to Taurus neck, to Gemini armes pertayn,  
Cancer the breast, Leo the heart Virgo the womb both gain:  
On Libra loynes, on Scorpio secrets, on Sagittary thighs  
On Capric. knees, on Aquary legges, on Pisces foot retires**

Act of Bachelors in both Universities, to enter  
the first day of Lent.

Act of Masters in this yeare in Cambridge In  
126. In Oxford July 12.

## Times of Marriage prohibited, ex- pressed in verse.

*Coniugium Aduentus prohibet, Hilariq. relaxat.*  
*Septuagena vetat, sed Pascha octava relaxat.*  
*Rogamen vetitat, concedit tertia potestas.*

Englished thus.

*Aduent bids thee to conaine:*  
*But Hillary sets thee free againe.*

Aliter. 1624.

Agefina faves thee nay :  
Right from Easter faves, thou may.  
Agefina bids thee for to tarry :  
But Trinity giues thee leaue to marry.

## The Eclipses which happen this yeare

1624.

There will happen this present yeare of our Lord  
Eclipses,

Not visible to us :

Of the Sunne,

One the 9. day of March.

Another the 7. day of April.

Another the 2. day of September.

Of the Moone: one upon the 13. day of April.

Visible to us, one of the Moone the 24. day of  
March, a little before 5. at night, when the Moone  
will be darkened 19. digits.

Another the 16. day of September about 8. at  
night.

## A Proghoffication

The order of the times of Plowing  
Sowing, Weeding, and manuring of  
Grounds (with respect to the different  
nature of the Soyles) throughout  
the twelve Moneths, with  
their due limi-  
tation.

### Januarie.

**A**bout the beginning of this Moneth you  
may begin to Plow your Clapes, byman  
(unless they lye too high) where you mean  
to sow your Beane or Peas, being such  
where your harry grew the yeare before: and to let  
them lie to bliste, till the frost hath seasoned them,  
which will be sufficiently done by the midst of Fe-  
bruary, and then cast in your seede and Beanes.

In the beginning also of this moneth begin to  
fallow your sand grounds: except such whereon be-  
fore did grow Rye, which you may begin to fallow  
about the midst of this moneth, as also your gravelly  
grounds, which and white sands may every other  
yeare lye fallow.

About the end of this moneth begin to Plow and  
sow under furrow such Pease earth as is most  
light & breaking, continue till the midst of March.

### February.

About the midst of this Moneth begin to sow  
Pease and Beanes in your clay grounds as  
above said: and spring till your fallow field, con-  
tinuing till the midst of March.

### March.

Emcr. 1624.

March.

From the beginning of this Moneth be sowing your Vetches first, and then your Barly upon your rich ground: but if it be clay- (and ground of black clay, you may stay your sowing of Barly till the middell of this moneth.

In the middell of this Moneth also begin to sow your Rye: and small Pease and fitches, upon those red sand grounds, which be too weake for Rye or Barly, (which you shall spare to plow till this time) which sowing, you may hold on till the middell of April. And now also be loading forth your manure to your red sand grounds, that you did fallow that yeare after Christmasse, continuing till the middell of May.

Aprill.

From the middell of this Moneth begin to fallow and manure that part of your Clayes, and white sands, which shall take rest that yeare, continuing till the middell of May.

About the latter end of this Moneth begin to dighe and sundoch those mixt soiles which you sowed with Barly, and now also begin to soile your sand grounds.

May.

From the middell of this Moneth you may begin to plowe and sow Barly in your red sand soiles prepared the yeare before for this yeare. And upon the richest part of your old fallow white sand, marle grounds, which the Michaelmas before, when

## A Prognostication.

When you did sow your Wheat, Rye, and Maize, you did reserve for this purpose: continue till the midst of June.

Now also light and smooth your Clay barly appearing above ground. Begin also now to summer stirre your clay sand grounds.

### June.

From the beginning of this moneth begin to summer stirre your fallow field clay grounds. And when the weather serves not for plowing, bee weeding your clay wheat and Rye first, and then your barly, continuing till the midst of July.

About the midst of this moneth, begin to summer your red sand fallow grounds, and to weed your red sand Cane: also to summer stirre your white sand marle ground. Leade forth your manure betweene, to these grounds.

### July.

In the beginning of this moneth, set your marle sand grounds. And begin to summer stirre your black clays and red sand grounds.

In the midst of this moneth begin to looke into your meadows, and prepare for your Hay-Harvest: but if the weather be unseasonable, or the grasse not growne, then be sowing the clays which you first summer stirred: continue till the midst of September. Now also be sowing your fallow red sands, continuing till the midst of August: then will your barly sowne in such grounds be ready, which being mowed and caried, strait leade forth manure to those lands, from which you reaped your barly, which are most barren: and then plowe both them and the rest, having done by the midst of September, so suffered to rest till the beginning of October, when you shall begin

Einer. 1614.

begin to sowe that field ouer with Rye. Note also  
be sowing your mixt grounds of clay lands.

August.

from the midst of this Moneth, begin to sowe  
wheat, Rye, and Maslin, in your clay and white  
lands, and to winter-ridge your clay lands.

Towards the end of this moneth, sowe wheat,  
Rye, and Maslin upon claylands, and winteridge  
your blacke clages and lands.

October.

from the beginning of this Moneth, sowe your  
red sand grounds with Rye.

About the latter end of this Moneth, begin to  
winteridge your white or gray clay grounds for the  
whole yeare, continuing till the beginning of De-  
cember.

November.

from the beginning of this Moneth, begin to  
winteridge your fallow red and white sands, I  
meane that which is reserved for barley.

December.

Continue your former winteridge, till it bee  
ended.

## The Temperature of the foure parts of the yeare.

The Spring.

**I**t takes his beginning, when the Sunne en-  
ters into Aries, about the tenth day of March,  
and holds till the Sun haue made his entrance  
into Cancer,

This

## A Prognostication.

This time of the yeare is temperate and encreaseth blood. The sicknesses which are then most common, proceede from the great impurity of those humours which our bodies haue gathered in the time of winter.

### The Summer:

It takes his beginning from the Sunnes entering into Cancer, which is about the 11. of June, and holdes till the Sunne haue made his entrance into Libra.

It is in temperature hot and dry, and then chollic both encrease and abound: because the serous and colde humor of the body easily passing away thorow the open pores of the skine, the extreame heat is breathed in, and insinuating it selfe through the secret passages of the body, so encreaseth heat and chollic.

### The Autumne.

It begins when the Sunne enters into Libra, which is about the 13. of September, and continues untill the Sunne haue made his entrance into Capricorne.

It is of an unequall temperature, breeding many diseases by variously affecting the bodies of men, whilst the heat thereof is sometime distant inward, sometime outward.

### The Winter.

It takes his beginning when the Sunne enters into Capricorne, being about the eleventh of December, and continues till the Sunne haue made his entrance into Arica.

It is intertemperature colde, and by reason of the  
and most ayre that our bodies then containe  
heryen, and colde feede, it heapes together great  
quantity of rheumatick matter.

A ready way to reckon what our  
expence by the day comes vnto in  
the whole year.

So many pence as we spend a day, comes in the  
yeare to so many pounds so many halfe pounds,  
so many groates, and so many pence, which  
all together, is the summe of the yeares expence.  
For example: Suppose you spend a great a day,  
thus: foure pence the day, is foure pounds,  
halfe pounds, 4. groates, and 4. pence: which put  
together, maketh sixe pounds, one shilling, eight  
pence. So seauen pence the day, is seauen pounds,  
seauen halfe pounds, and seauen groats in the yeare,  
which set together, maketh ten pounds 12. shillings  
4. pence. And so in the rest.

How to know by looking  
vpon the Moone, when it is in the  
encrease or decrease, and how long  
it is to or since the change  
or full.

If the hornes or darke side of the Moone be to-  
wards the East, or on our left hand, then is the  
Moone encreasing: but if the hornes or darke  
of its body be towards the West or on our right  
hand, then it is decreasing.

The

## A Prognostication.

This time of the yeare is temperate and encreaseth blood. The sicknesses which are then wont to raigne, proceede from the great impurity of those humours which our bodies haue gathered in the time of winter.

### The Summer:

It takes his beginning from the Sunnes entering into Cancer, which is about the 11. of June, and holdes till the Sunne haue made his entrance into Libra.

It is in temperature hot and dry, and then chollic both encrease and abound: because the serous and colde humor of the body easily passing away thorow the open pores of the skinn, the extreame hot ayre breathed in, and insinuating it selfe through the secret passages of the body, so encreaseth heate and chollic.

### The Autumne.

It begins when the Sunne enters into Libra, which is about the 13. of September, and continues untill the Sunne haue made his entrance into Capricorne.

It is of an vnequall temperature, breeding many diseases by variously affecting the bodies of men, whither the heat thereof is sometime vntoward, sometime outward.

### The Winter.

It takes his beginning when the Sunne enters into Capricorne, being about the eleventh of December, and continues till the Sunne haue made his entrance into Arics.

It is intemperature colde, and by reason of the  
 and most ayre that our bodies then containe,  
 sleeping, and colde feede, it heapes together great  
 quantity of rheumatick matter.

A ready way to reckon what our  
 expence by the day comes vnto in  
 the whole yeare.

As many pence as we spend a day, comes in the  
 yeare to so many pounds so many halfe pounds,  
 so many groates, and so many pence, which  
 albe together, is the summe of the yeares expence.  
 For example: Suppose you spend a great a day,  
 thus: foure pence the day, is foure pounds,  
 halfe pounds, 4. groates, and 4. pence: which put  
 together, makes sixe pounds, one shilling, eight  
 pence. So seauen pence the day, is seauen pounds,  
 seauen halfe pounds, and seauen groates in the yeare,  
 which set together, maketh ten pounds 12. shillings  
 4. pence. And so in the rest.

How to know by looking  
 vpon the Moone, when it is in the  
 encrease or decrease, and how long  
 it is to or since the change  
 or full.

If the homes or darke side of the Moone be to-  
 wards the East, or on our left hand, then is the  
 Moone encreasing: but if the homes or darkness  
 of its body be towards the West or on our right  
 hand, then it is decreasing.

The

## A Prognostication.

The Moone encreasing doth not for the most part  
appeare, till the fourth day after the change, and  
then it shewes like a horne or sickle, and is first seen  
in the evening.

When the body of it is halfe enlightened toward  
ward, it is about 7. dayes from the change, and is  
many to the full, and we commonly call it the first  
Quarter. If three parts of its body be enlightened  
towards the west, it is about foure dayes to the  
full.

When the Moone is in the full, it arises in the  
East, while the Sunne is setting in the west, so  
both may be seene together, and shines all the night  
throughe about the earth, and is all the day vnder  
the earth.

When we see one part of the body of the Moone  
darkned towards the west, it is about foure dayes  
since the full.

When the west halfe of the Moones body is  
darkned, it is between seauen and eight dayes since  
the full, and we commonly call it the last quarter.

When three parts of the Moones body be dark  
ned towards the west, it is between thre and four  
dayes after the change.

Upon the change it may continue foure dayes  
more.

The

The principall Fayers of England and  
Wales, orderly set foorth; with the  
Moneth, Day, and Place, where  
they be kept.

Faires in January.
